

FLOWMARK

MARK-II-SP RESIDENTIAL SWIMMING POOL WATER TREATMENT

FLOWMARK MODEL MARK-II-SP

FlowMark Technology Overview

The FlowMark Water Treatment System is an electronic, non-invasive device that applies powerful energy pulses through the pool plumbing which alters the normal scaling behavior of hard water.

High levels of calcium hardness are critical to proper pool water chemistry to protect the pools surface from aggressive water. FlowMark allows the pool water to hold high hardness levels but behaves more like soft water for a luxurious feel.

FlowMark products are manufactured in the USA with top quality components and have an expected service life of 20 years.

- Nema 4X Water Resistant Enclosure
- Runs on 110 or 220 VAC
- Works with all pool surfaces

Reduce Swimming Pool Maintenance

- ◆ Prevents calcium scale from forming on pool surfaces, rock-scape and equipment
- ◆ Gradually removes existing scale deposits
- ◆ Reduces surface tension for a soft water feel
- ◆ Reduces chlorine demand (Approximately 35%)
- ◆ Enhances pool filter performance
- ◆ Compliments Salt Systems & Copper Ionizers

Solve this problem once and for all.

Spend more time enjoying and less time maintaining your pool
